Art Unit: 3742

Specification

Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Claim Objections

Claims 3-7 and 11-16 objected to because of the following informalities: The term "invisible light", used in claims 3 and 11, is a contradictory term as light by definition is visible to the "human eye". Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 3742

Claims 1-4, 8, and 11-12 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Heilbrun et al.(U.S.Pat.6,165,181). Heilbrun discloses an apparatus and method for photogramming surgical localization for use with PET, MRI or CT imaging systems that uses two 2D projection from different locations(cameras) to reconstruct a 3D framework that can be aligned with a framework produced by one of the 3D volume scans. The system uses multiple cameras at multiple locations with a laser light source to produce light markers for alignment.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 6 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Heilbrun in view of Cosman(U.S.Pat.6,143,003). Heilbrun does not show two light sources used together. Cosman discloses a repositioner for head, neck and body that uses two light sources to position a patient's body. It would have been obvious to one of ordinary skill in the art at the time of the claimed invention to use two light sources as taught by Cosman with the device and method of Heilbrun because they provide for alignment of the fiducial markers.

Allowable Subject Matter

Claims 9 and 16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter:
The prior art of record neither teaches or suggests a method or device as claimed wherein a marker array is used to track, in the navigation system, the relative movement of a body part being referenced.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Heywang-Koebrunner, Kuth, Potthast, Takeda, Manwaring, Yu, and Szeles are cited to show structure similar to the claimed invention.
